

Bangladeshi company launches new product at Dubai fair

Bangladeshi company REVE Systems, a telecom focused solution provider, has attracted huge number of visitors to its Mobile VoIP solutions at the Gitex technology week 2009 in Dubai.

October 21,2009

REVE Systems is one of the two Bangladeshi companies joined the bandwagon of over 3,300 IT firms from 83 countries converging on Gitex which is rated as one of the world's top three ICT exhibitions and biggest international trade events for IT and telecommunications in the Middle East.

REVE Systems on Monday, launched worldwide iTel switch plus and iTel pin protector besides launching of new version of a soft dialer, iTel Mobile Dialer, to facilitate direct VoIP call from mobile phone using internet.

REVE Systems, a Symbian Network Partner Company, organized a presentation session on Mobile VoIP Challenges and Opportunities at Zabeel Hall marking the launching of new products of its new version of other product.

'Our iTel range of products in Mobile VoIP helps consumers make VoIP calls from their mobile phones – thereby making it very convenient for consumers. The products have been so designed that the user experience is the same like making a regular call from their mobile phone,' M Rezaul Hassan, chief executive officer of REVE System told New Age.

He said that REVE has more than 500 clients in 50 countries worldwide and we were proud that our product drawn an attention of a good number of business people at the gitex,' Sanjit Chatterjee, director marketing of the company at the presentation said that iTel switch plus is a soft switch software application with integrated billing solution and interactive voice response system.

iTel switch Plus can be used in a single server platforms as well in distributed architecture its scalable and redundant deployment architecture makes it suitable for large IP carriers, who want a fail proof system today's competitive and service oriented market,' said Sanjit.

About the iTel pin protector, an application to protect issues like Pin hacking and fraudulent usage of pin or dialer, Sanjit said that 'this works on the principle of authentication of the IMEI number of the device, along with the pin to make it a total secure.'

Rezaul Hassan said that REVE Systems has been providing software and services to VoIP Operators since 2003. The core competency of REVE Systems is billing solutions for telecommunication industry. REVE Systems is focused for developing software and solution for VoIP industry only.

'Mobile VoIP market will grow drastically and recent economic crisis will faster this growth. This is the right time to take decision about it,' he said.

Rezaul said that service provider now can launch its mobile VoIP service easily with iTel Mobile Dialer and the demo version of the product is available for free download from its website www.itelbilling.com.
