

**ADD VALUE TO YOUR SERVICE  
RETAIN YOUR CUSTOMERS**

with Own Mobile OTT Solution

## **iTel IM Dialer**

A White Label & Customizable Mobile OTT App

iTel IM Dialer is a white label and customizable mobile OTT solution that allows communication service providers to build their own branded VoIP based OTT app and launch service on the existing network. Users registered under service provider's brand, can communicate with each other through this app over multiple platforms like: android, iOS, windows and PC. With this mobile OTT solution, Service Providers can offer Instant Messaging (IM), Media Sharing, Audio-Video Calling beside Cheap International Outbound Calls, Mobile Top Up and many more trendy features to drive traffic and grow user base while retaining existing users. Furthermore, service providers can fight the rising competition from top OTT players like Skype, WhatsApp, Viber and others without bringing any change to their existing business with an own branded mobile OTT app.

## WHY iTel IM DIALER

### White Label & Customizable

Customize the app and its features under your own brand name, based on your business & users need to compete with top OTT players by saving huge time & money

### Faster Calling & Messaging

Customize the app and its features under your own brand name, based on your business & users need to compete with top OTT players by saving huge time & money

### Best Quality in Low Bandwidth Areas

Customize the app and its features under your own brand name, based on your business & users need to compete with top OTT players by saving huge time & money

### New Revenue Streams

Customize the app and its features under your own brand name, based on your business & users need to compete with top OTT players by saving huge time & money

### Schedule Messaging

Users can schedule their text messages to be sent at a future date and time with the opportunity to show the real date when this message was created

### Self Destructing Messaging

This app is capable of sending messages that delete itself after a certain period of time (depends on client's requirement) and no trace or history left behind

### Multiple Language

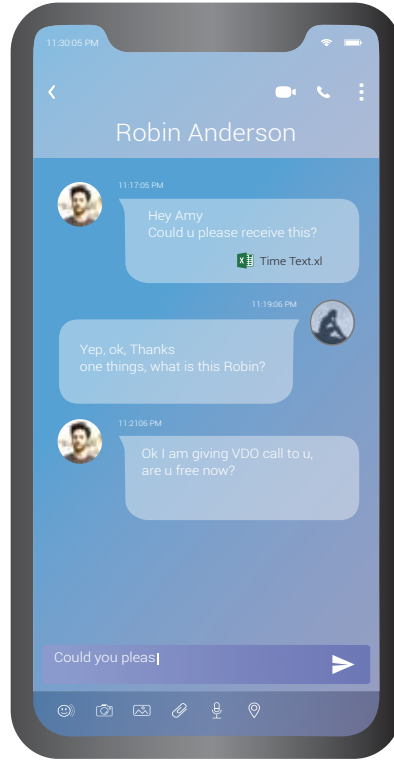

Users can communicate with each other in their preferred languages by choosing the language themselves

### File Compression

Users can easily make valuable storage space, backup data or send files back and forth to others quickly and efficiently by compressing files into smaller files

## ADVANCED FEATURES

### Hide Chats

Users can hide individual or group chat from their chats screen which only they can access later with a secret PIN. Hide options are Password, Finger Print and Shake

### Sticker Connection API

End user will be able to buy sticker through the App and creative person will get the royalty

### Message Searching

With Search, users can find right messages and files when they need to. Search results will include messages or files containing all of their keywords.

### Confide Activation in Apps

Users cannot take any screen shot. After viewing, it will be removed automatically. When user will keep finger on message screen, it will show once and will be removed automatically.
